

CHALLENGES BY MARTY

Dance Party: Guide

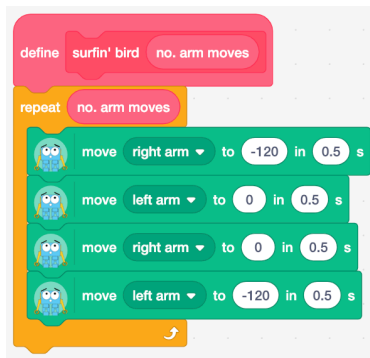

1 Basic Moves

String together some different moves to create a small dance. Try changing attributes like time and length to mix things up!

2 Functions

Create functions to represent different dance moves so you don't have to repeat chunks of code!

3 Music

- Pick a song for Marty to dance along to - see if you can program him to be in time with the music!

4 Next Steps

- Turn things into a music video - pick a background setting and record Marty's dance moves!
- In Python can you control more than one Marty to do the dance so that you have a small team of Martys doing a dance together?
